ASSEMBLY

Follow these instructions for the installation of **lifting pole floor standing**:

Remove the various components from their packaging and place them on the floor.

Ground the base; Rotate the arc of contrast; Insert the junction tube between the base and the contrast arc; Apply the two screws from M8 and tighten with a 13 wrench.

Insert the top shaped tube and place it at the desired height and secure it with the supplied M6 screw with blind nut

Then position the strap so that the rubber reinforcement remains between the two pins in the tube

Adjust the strap through the fiber at the desired height.

To install the **lifting pole base attached** follow these instructions:

Apply the clamp **provided only for the Vaimas beds** in the cross-section of the net (raised side) towards the outside at any position permitted on the crossbar and then tighten the 2 screws.

Insert the top shaped tube into the desired height at one of the three prepared holes and secure it with the screw supplied with M6 with a blind nut.

Insert the clamp into the head tube and tighten it with the knob

Then position the strap so that the rubber reinforcement remains between the two pins in the tube

Adjust the strap through the fiber at the desired height.

 SAFETY

- Make sure that the lifting pole are well positioned and according to the bed model fixed or leaning flat on a rigid surface
- Check the status of the triangle strap and the mounting screws on the frame
- Adjust the length of the belt and the height of the frame
- Attend the sick person during the elevation operation and pay attention during use
- Do not tamper with or change the parts of the lifting pole
- Avoid abrupt movements or dangerous oscillations
- Do not exceed the maximum permissible span specified in the technical data sheet and the relevant CE label on the aid
- The manufacturer declines any liability for damages caused by improper use not provided in this manual.

 MAINTENANCE

The lifting pole do not require special maintenance, however, it is advisable to check the connection of the various components of the structure, the strap and the triangle

CLEANING

For cleaning, it is recommended to use non-abrasive detergents by passing the affected parts with a damp cloth and dry immediately.

In case of wall sanitation of hospitals or nursing homes use products whose known degree of corrosion is not to damage the bed.

Observe product specifications regarding temperature concentration and reaction times. In any case, do not use sulfuric or mineral acids.

For use and safety refer to the manufacturer's safety data sheets.

DEMOLITION AND DISPOSAL

The materials of which it is composed are painted or galvanized steel, plastic material.
